We are ASAlaser.

WE TELL YOU SINCE WHEN.

Since 1983 we have been working to be a reference point in Laser Therapy and Magnetotherapy in many fields: from physiotherapy to rehabilitation, management of muscular and articular pain to sports medicine. The results of our work have made us a recognised world leader in the knowledge and development of advanced technological development in the "pain management" area: a recognition confirmed in 2003 by our entry into the E.I.En. Group, one of the most important realities in the Laser world.

We research.

AND WE'LL TELL YOU WHY.

We have always believed that research is not just the confirmation, but also the premise, that is necessary for our work. Created from the union of ASAlaser and the Biomedical Experimental and Clinical Science Department of Florence University- Italy, the ASAcampus laboratory tests the validity of our work and improves results over time thanks to three important things: an extensive study of the photochemical, photothermal, photomechanical effects of the interaction between the laser impulse and biological tissue; surveys, taken to a molecular level, on the mechanisms that are at the roots of the biological reply; evaluation of the therapeutic effects. The results of our research are presented at conventions and appear in many scientific publications.

We produce effective innovation.

AND WE'LL SHOW YOU HOW.

Our medical devices Laser Therapy (MLS® and Hilterapia®) and Magnetotherapy include things that we think can't be left out: advanced technology and software, effectiveness and safety, ergonomics and design. They offer care methods that are ever more specific and personalised. The effectiveness of our therapy is continually tested thanks to the research carried out in ASAcampus, the results of which are constantly transferred to clinical applications.

We are ASAlaser: proud to improve the quality of people's lives. Since 1983.

We have a story.

AND WE'LL TELL YOU IT THROUGH
OUR CHOICES.

Since 1983 we have been working to be the main reference point in Laser Therapy and Magnetotherapy. Our story is based on a precise choice: managing the whole production cycle of our medical equipment internally, and adding the results of the research carried out in ASAcampus.

We are Worldwide.

WE WORK TO MAKE ASALASER REACH
THE WHOLE WORLD.

Clinics and public and private studios in more than 50 countries are applying our therapy solutions, working with ASAlaser medical equipment. Their aim is also our aim: to successfully treat painful pathologies in human as well as in veterinary fields.

We work for humans and animals.

WITH ASALASER AND ASAVETERINARY.

ASAlaser produces effective medical devices for Laser Therapy (MLS® and Hilterapia®) and Magnetotherapy in the physiotherapy, orthopaedic, traumatology, rheumatology, dermatology sports medicine and rehabilitation medicine fields, both in a human and a veterinary ambit. The ASAveterinary division

arose "from" and "in" ASAlaser, with the precise aim of spreading the excellent results of Laser Therapy even to companion animals, horses and exotic animals.

We can talk
about Research.

AND RESULTS.

We have always believed that research is not just the confirmation but also the premise that is necessary for our work. ASAcampus, our laboratory created from the union of ASAlaser and the Biomedical Experimental and Clinical Science Department of Florence University, our ASAcampus laboratory allows us to constantly evaluate the effectiveness of our devices and to go forward, transferring the results obtained from research in performances to the clinical applications. The work carried out in ASAcampus includes three important processes: an extensive study of the photochemical, photothermal, photomechanical effects resulting from the interaction between the laser impulse and biological tissue; the survey, taken to a molecular level, of the mechanisms that are the basis of the biological reply; evaluation of the therapeutic effects. The results of our research are presented at conventions and appear in many scientific publications.

We do training.

IN ALL COUNTRIES WHERE OUR
TECHNOLOGY IS BEING USED.

Every year ASAlaser organises training courses in many countries of the world, where our technology is present. The courses are held by teachers who have a specific preparation obtained from using our devices.

We believe in #sharing.

THANKS TO THE WEB AND SOCIAL NETWORKS.

We can open company doors and share ASAlaser's world and our work with you using our web sites and our presence on Facebook, Twitter, and Youtube. We post every day updates on events, trade fairs, appointments, research, clinical cases. At the same time, the web and social networks give us the possibility of listening to those who work with our devices and of dialoguing with people who have tried

our therapy solutions: their questions, suggestions, and experience are very important for us because it's thanks to them that we can anticipate market requests, making our goals continually more useful and interesting.

We propose therapy solutions that make you smile, feel good, live better.
